

MicroLabSecure is a Cooperation partnerships in Vocational Education and Training (KA210-VET) under the Erasmus + Programme coordinated by Turkish Society of Microbiology.

This project aims to identify the biosecurity risks and management that medical microbiology laboratory workers may face before, during, and after a disaster, to increase the vocational skills of workers on biosecurity, and to create a digital training set and resource center.

**Developing a Biosecurity Training Program for Preparedness for Future Disasters and Increasing the Voc. Skills of Microbiology Lab Health Professionals (Micro Lab Secure)**

Project 2024-1-TR01-KA210-VET-000252996

**The objectives of the project are;**

- To create instructions and algorithms including biosecurity measures to be taken in the microbiology laboratory before, during, and after the disaster,
- To create digital training sets to increase the vocational skills of microbiology laboratory workers,
- To create a digital resource center on an online platform that staff can access on biosecurity in disasters

**CONCRETE RESULTS**

- Training contents
- Training modules
- 10 training videos
- Handbook for learners

**Activity Title**

- Kick Off Meeting (Online)
- Transnational Project Meeting (TPM) - Learning Teaching and Training Activity (LTTA)-Spain
- Creation of Training Materials and Modules Dissemination Exploitation of the Project
- Transnational Project Meeting (TPM) - Portugal
- Closing Meeting -Türkiye
